Portfolio

PROFILE

Full-stack AI Engineer who builds across the AI stack: RAG systems, ML models, and the agentic architectures that put them into production. 3+ years shipping AI-driven features, from custom retrieval pipelines and trained prediction models to MCP-integrated agents across healthcare, education, and recruitment platforms.

SKILL

- **AI & Agentic Systems:** LLM Integration , Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), Agentic System Architecture, **LangChain**.
- **Machine Learning & RAG:** Model Training & Deployment (Scikit-learn) · **RAG** System Design · **Embeddings** & Vector Search · Hybrid Search & Scoring Systems.
- **Languages & Frameworks:** Python · TypeScript · FastAPI · Node.js · React.js · Next.js · React Native.
- **Databases:** PostgreSQL (pgvector) · Milvus · Pinecone · MongoDB · MySQL
- **DevOps:** Git, Docker · Jenkins · SonarQube · GitHub Actions · GitLab CI/CD
- **Languages:** Arabic (Native) · French (Fluent) · English (Fluent)

PROFESSIONAL EXPERIENCE

Full-Stack AI Engineer – Noble Mind

FROM November 2025

- Design and implement **AI agentic** systems and **RAG** pipelines.
- Delivered across multiple domains : healthcare, education, and beyond including clinical decision support, AI tutoring, and content/news applications.
- Build and maintain Electronic Medical Records (**EMR**) systems handling sensitive patient data, ensuring secure, compliant, and reliable clinical workflows for healthcare providers.
- Architect **ETL** pipelines to extract, transform, and load data across multiple sources.
- Develop scalable full-stack web and mobile solutions using Next.js, Python, and React Native, ensuring performance and consistency across platforms.

Full Stack Developer — Parheliion

February 2022 – January 2024 – *Completed alongside university studies*

- Design and build full-stack web and mobile applications using Angular, React, React Native, Spring Boot and Node.js.
- Built and trained five machine learning models using Scikit-learn to classify and predict multiple disease types.
- Implemented **CI/CD** pipelines with Docker, Jenkins, and SonarQube to streamline integration and deployment.
- Delivered end-to-end features across frontend, backend, and database layers, collaborating within an **agile** development team.

Full-Stack & AI Developer (Internship) — B2M-IT

January 2024 – June 2024

- Designed and developed a healthcare platform powered by machine learning for disease prediction.
- Built and trained five machine learning models using Scikit-learn to classify and predict multiple disease types.
- Implemented **MLOps** pipelines using Docker, Git, and MLFlow.
- Integrated trained ML models into full-stack web and mobile applications using React, React Native, and FastAPI.

EDUCATION

Software Engineer Degree — ESPRIT (2019 – 2023)

Septembre 2019– juin 2023

Baccalauréat, Computer Science Track (High School Diploma) — Rades High School

Septembre 2015– juin 2019

SIDE PROJECTS

- **NexTalent** (ATS Recruitment Platform) : Built a **RAG**-powered recruitment platform with tri-vector embeddings (skills, experience, education) and hybrid semantic + keyword scoring, using FastAPI, PostgreSQL + pgvector, and Next.js.
- **EduGenUI** : Built an AI tutoring platform using agentic architecture (**Mastra**, **AG-UI**) with curriculum-grounded RAG across Tunisian school subjects.
- **Smart CI/CD Release Gate** : Built an **MCP**-based agentic system using Google Gemini AI to analyze test/code/security metrics and auto-generate deployment approve/block decisions.

CERTIFICATIONS

- Fundamentals of AI Agents Using RAG and LangChain — IBM
- Developing LLM Applications with LangChain — DataCamp
- Generative AI — Coursera
- AI Fundamentals — DataCamp
- PCAP (Python Certification)
- Introduction to MCP – Anthropic
- React Native Developer – Meta
